

You will notice that there are (or soon will be) air purifiers in classrooms 1-6. These are portable, commercial grade units. These Classrooms will have a permanent air purification component installed in the new HVAC equipment within 2-3 weeks. Until then, these units will help purify the air and eliminate airborne viruses.

Attached is the **product sheet for the Air Oasis 3000XG3**. See pages 1 and 5 of the Product Sheet to provide you a summary of the equipment for your records. The equipment will be on a timer so that professors/students do not have to worry about turning it on/off.

Page 3 of the PDF gives a description of the ability of the equipment to purify the air of germs. Here is the pertinent information: "This professional air purifier employs an energy-efficient germicidal ultraviolet light lamp and a AHPCO catalyst to destroy harmful carbon-based molecules. For commercial air cleaners, the AHPCO technology is more powerful than high-efficiency particular air (HEPA) filters in eliminating harmful micro-organisms."

The other classrooms will also have this equipment in them on a permanent basis (rather than as part of the HVAC). As we are able, other areas of the building will also have this equipment in place.
